LETTER OF RECOMMENDATION

It is with a great amount of content that I am writing this letter of recommendation for Harsh Modi. I have known Harsh for 2 years in my capacity as a teacher. I taught him 'Computer Networks' in his 3rd year of under graduation and conducted the lab sessions for the same.

In the Computer Networks course, Harsh was among the very few students from his entire batch to secure the top grade (AA). This, in my opinion, is no minor feat given the rigorous coursework for the subject. He was able to achieve great results not just in the theoretical coursework but in the practicals as well. Harsh always showed a striking ability to connect theory to practice. This was highlighted from his assignment submissions and his active participation in the lab sessions solving complex problems with relative ease.

During his 3rd year of under graduation, I have had the opportunity of understanding his role in the projects and experiencing the final product up close as a member of the panel of professors judging his team's work periodically. And I have nothing but praises for the efforts and skills he has put in all his projects as the team leader and a very integral technical member. I would especially like to mention his android application project 'MedPharm' where he along with his team tackled a very critical issue of ease of availing healthcare facilities in India through digital prescriptions, cost-effective medicine alternatives and information of nearby pharmacies. He worked with Java, Google APIs, Google Firebase, and Node.JS to build a strong backend for the application which showcases his ability to quickly grasp new technologies is short timeframes to build quality products.

It sure is difficult for a student to maintain good grades in the hectic academic schedule. However Harsh never shied away from taking up additional responsibilities while excelling in academics. He played key roles in ensuring that his branch lifted the Literary Cup for 2 consecutive years and were the runners up in table tennis and tag rugby tournaments. He also held the position of 'Photography Head' of the department.

Taking everything into account, Harsh manifests the qualities of a leader, a person who wants to make an impact and a self-motivated student with a keen interest in the computer science field. Hence, I unhesitatingly recommend him for the graduate program at your university.

Ms. Rashmi Welekar
Assistant Professor
Department of Computer Science Engineering
Shri Ramdeobaba College of Engineering and Management, Nagpur
